

VOLIBERATISM

A Practical Philosophy for the 21st Century

Be Fulfilled – *Today!*

**Beat Meaning Scams
(Even the AI Ones)**

By Timothy Franck

Voliberatism

A Practical Philosophy for the 21st Century

Written to be “Free to Everyone”

By Timothy Franck

Preface

So What is Voliberatism?

From a practical standpoint, Voliberatism:

- Explains how we can achieve a Fulfilled life right away – and what “Fulfilled” even means
- Reveals the root cause of our species-wide motivation to find Meaning, and how to avoid “Meaning-Scams” which take advantage of that inherent inner drive
- Shows us how to identify our own “important” things in life, and how to prioritize working on those things
- Demonstrates how micro-actions on your customized list of “important” things inoculate you even against forthcoming, ultra-powerful, AI-assisted Meaning-Scams.

And finally, Voliberatism is a formal philosophy, so it takes a position on Reality, Logic, etc. But all that boring stuff is at the end, as an Appendix, so you never really have to read it. ;)

Why should you care?

Well, suppose you quickly wanted to start living an Actualized Life.

It's in here.

Or perhaps you want to identify, and be protected from, forms of trickery by mental predators, specifically “Meaning-Scams,” which are only going to become more weaponized as AI grows.

That's in here, too.

Finally, as Voliberatism is quite useful, likely to spread since it's defined in a free book, you'll want to know what the hell people will be talking about.

To start your education:

Voliberatism is the philosophy which says:

**We can have an Actualized Life immediately, by
Volitionally acting on important aspects of life, which we
Deliberately select**

**We Misinterpret the emptiness we feel inside as a need
to search for existential Meaning / Purpose; which
emptiness comes from a lack of behavior-reinforcing
neurotransmitters – due to insufficiently focusing on
things our primitive-brain considers “important”**

**We can use a modified (inherently subjective) weighted
decision matrix to find out what is most “important” to
our primitive-brain, such that we can fill our brain-
feedback void by completing simple micro-actions**

And with the exception of the 1-2% of people whose dopamine/reward system is essentially offline, **Voliberatism is absolutely Awesome as a framework for living a truly Actualized Life** – no matter your cultural background, sex / identity, personal beliefs / religion, etc!

Get Lucky. Oh, Wait; We Already Are!

This was me in early 2025, on the airport's Injury Bus, 20 minutes after surviving the crash of flight 4819. Not my favorite selfie.

This particular plane incident happened with zero warning – it just descended too fast and crashed on touchdown. Then there was about 10 seconds of really loud noises, rolling, and sliding to a stop, ending with us hanging upside down from our seatbelts and hoping fuel fumes didn't ignite before we could exit.

Interestingly, though I have second-by-second recollection of the crash, I didn't even once think, "This is the end, I wish I could have..." – more on that later.

Yet, that crash actually Could have been, "The End." All my life aspirations, however cool or lame they might be, might well have ended at That Very Moment.

The cited life experiences used to later compile my biography would have been complete.

No one would ever see what my old-man wrinkles looked like.

My children would just have to guess about my reactions to their future accomplishments.

Some homeless guy would end up walking around downtown in my \$400 mountaineering boots (actually, if I didn't need them anymore, that would totally be fine with me – they're very warm)...

You get the idea.

We in that particular plane just got lucky.

Honestly, though, I'm lucky to be alive and typing this right now, just as you're lucky to be alive and reading this right now.

Hell, we're all lucky to even Exist as conscious human beings – and every reputable scientist in the world will confirm that notion.

Whoa – Every Single One of Us is Lucky! What a great realization!

And a great starting point to how we look at life.

So let's appreciate our good luck by living an Actualized Life daily – starting Now!

Introduction

Origin Story

The first, Actualized-Life, Part of Voliberatism

In February, 2025, I had a near-death experience in surviving that commercial airplane crash I mentioned earlier – purely by good luck and good airplane design. And just as unusual as the crash itself, is that I survived and afterwards felt that I had Nothing to change about my life to be Fulfilled – even if I had died right then.

Not because I don't have anything left to learn or do or improve in this life. Just the opposite, in fact; I'm constantly seeking new and exciting things to learn and do, and always trying to improve.

The reason I didn't need to change anything in my life after crashing is because of the life philosophy I always live in relation to having an Actualized / Fulfilled life – all the time.

That part of Voliberatism (even before it had its name) explains why we don't need to accomplish goals, and how we can be Fulfilled immediately – just by focusing on a few key aspects of life.

Those key aspects come from much earlier philosophical writings of mine, which I've now formalized and combined into the Venn diagram you see on the cover of this book – learn details in Part 1.

And that's the first part of Voliberatism;

How to be Fulfilled – Today!

The second, Meaning misinterpretation, Part of Voliberatism

During another (not-crashing) airplane flight, this time in July 2025 (apparently a lot of interesting things happen to me on airplanes), the chemicals and synapses in my brain aligned in a way that evoked a solution to another of life's great problems.

In this case, I now understand why humans are always hung up on finding "Meaning" in life. And consequently, I figured out how to better resist falling for "Meaning-Scams" we're otherwise susceptible to, because of our Meaning obsession.

Not just relatively little scams like buying insurance we don't need, or signing long-term gym-membership contracts.

I'm talking about huge Meaning-Scams like convincing ourselves we're happy working a job we know deep-down is mentally and / or physically unhealthy. Or getting so caught up in partisan brainwashing that we start thinking some humans are inherently worse than others because of Their own partisan brainwashing, or temporarily espousing violence we would normally be against. Etc.

Huge scams! And all of us fall for at least some of those Meaning-Scams – because of our compulsion to find "Meaning" in life!

In Part 2 I'll demonstrate how that mechanism works, and show you how to detect and resist Meaning-Scams – not just scams in the future, but the ones which may already be part of your life. Which allows you to:

Skip the Meaning trap and resist Mental Bondage!

The third, Find-Important-Stuff, Part of Voliberatism

This Part centers around deciding what things are “important” to us, and figuring out how to prioritize working on those things.

Taking small actions in these areas of focus is critical – both for obtaining an Actualized Life, as well as to resist Meaning-Scams.

Sometimes ignoring our feelings in making decisions about what is important can cause us to miss subtle cues from our (unconscious?) brain – because the feeling-decision might outwardly seem irrational. [“Yes, Dad, I know studying Accounting makes logical sense, but I really just want to play drums” -Neil Peart (“Rush” drummer). Okay, fine, I just made that up – but you get the idea :)]

On the other hand, simply, “going with your gut,” without a logical decision-making process, can cause us to stray too far from rational choices – sometimes with heavy life consequences. [think of your oddball uncle living in his van, talking exclusively to his travel-cat]

When choosing a college to attend as I got out of the Army, and again when choosing my professional career, I found that using a Weighted Decision Matrix (WDM) was a good way to mix the influence of both the “rational” factors, as well as “gut” factors.

Yes, you Decision Theory geeks, weighted decision matrices are aptly criticized for introducing subjective influence into decisions. Exactly right – and it turns out that’s just what we’re looking for!

In Part 3, I’ll demonstrate setting up and using a WDM to choose areas of focus that are “important” to you, individually, based on the “VITAL-27 Life Factors”.

And that’s: **How to find what’s Important to you!**

The fourth, AI-powered Meaning-Scam warning, Part of Voliberatism

Just as fire can be useful to warm your home, cook your food, or produce power for your city, fire can also burn your entire city down if it's not properly controlled. And it's particularly bad if it's deliberately used as a tool for destruction.

AI is a lot like that; seriously useful when well-managed, but in the hands of forthcoming Meaning-Scam arsonists, it will be absolutely devastating to the minds of the unprotected.

Tech-savvy predators have already created AI-assisted scams which clear over a \$1T USD (yes, “trillion”) for them, annually – and those are just regular scams.

When those bad actors begin crafting and presenting custom-tailored Meanings to exactly match their victims’ brain-drug reinforcement patterns based on your data-exhaust, real-time, it will take most of the world unaware. Your wallet, time, independent thought, and even your sanity is at stake.

This is happening fast – within 1-2 years we’ll start seeing these, as the technology already exists!

Fortunately, the same micro-actions on “important” things we choose in Part 3, will stimulate your brain enough naturally to keep you from feeling the lack-of-brain-drugs void, which makes humans so susceptible to Meaning-Scams – even AI-assisted ones.

And that’s the **virus-alert, but with inoculation, part of Voliberatism.**

The fifth, Philosophy-Geek, part of Voliberatism

Those who know me know that when I'm not working, or off adventuring somewhere, I love to read – sometimes even to the detriment of significant tasks I might ignore to do so.

I particularly enjoy reading stories, both fiction and non-fiction, where you gain insight into why the characters think and behave the way they do, i.e. where you really understand their philosophy.

Yet, in all my reading on formal, non-fiction philosophies, as well as in fiction (gleaning philosophy on Chivalry from "Ivanhoe," or on Objectivism from "Atlas Shrugged," for instance), I've never come across a philosophy that perfectly aligned with my own opinions on metaphysics, aesthetics, logic, etc. So I finally just wrote one!

I've actually been writing philosophical essays – some humorous, some serious, some as thought experiments – for over 40 years. In fact, the idea for Voliberatism as a new, formal philosophy has been percolating for years.

The recent insights I've had in solving some of life's most difficult problems, along with my plane crash near-death experience, has spurred me to finally formalize Voliberatism.

In fact, I've hardly been able to write and think about Voliberatism for months, now! Which is a first for me! I've written several chapters of half-finished books in long spurts of energy before – but never with this feeling of Need in finishing!

Anyway, that's the origin of the formal philosophy of Voliberatism itself – which, I'm sure you'll agree upon fully reading this book, is:

A highly practical philosophy for the 21st century.

Contents

There are 5 Parts to this work:

1. How to Live an Actualized Life – Today!
2. Understanding the Cause of Our Incessant Search for Meaning – and How Others Scam Us Because of It
3. Focusing Your Primitive Brain; Picking, Prioritizing, and Acting on Your Own Version of “Important” Stuff
4. AI-assisted Meaning-Scams and Your Built-In Resistance
5. Appendix: Formalizing Voliberatism

Part 1:

How To Live an Actualized Life – Now!

Voliberatism versus the World

Ancient concepts of living an “Actualized Life” include:

- Living according to some higher principle like a cosmic order, or virtue, or divine will

> **Voliberatism says:**

“Cosmic order” isn’t a real principle (maybe something in astrology?).

Virtue is subjective, and just a way of saying, “I’m better than you,” to feel better about yourself – while deep-down you know you’re not actually better.

“Divine will”: hmm, just not really into divinity.

- Cultivating inner characteristics

> **Voliberatism says:**

So... finding nuggets of hidden value within yourself, then polishing them to reveal how awesome you are. Seems kind of like a cheesy motivational poster, or maybe something that requires a scalpel.

And what happens if your inner characteristics suck, e.g. what if your best talents are for theft, or assault and battery – I guess you could then feel fulfilled in prison?

- Transcending your limitations / escaping suffering

> **Voliberatism says:**

This is outdated; it's pre-gym, internet, biotech, and DOCG Barolo.

And in modern times, plenty of motivational speakers, psychologists, and online influencers will (for a fee) tell you all about ascending to ultimate Fulfillment. There are even cool tattoos for it, too!

Yet, what does living an Actualized Life really mean, anyway?

Voliberatism defines an Actualized Life as:

Daily trying to improve yourself and your circumstances and the circumstances of those you care about, cultivate positive relationships, and produce creative works – all while having fun.

Why Goals Suck

Do a little research online and you'll see that thousands of books have preached discipline and goal-setting as a means to self-improvement for literally thousands of years.

And while goals are okay as business milestones, goals are not at all okay for personal fulfillment / living an Actualized Life. In fact, in that context, goals are bullshit.

If we live for goals it means we've failed if we happen to die before we achieve those goals.

That idea is especially impactful to me personally; if I had died in my airplane crash I'd have been a failure by goal standards.

And while we're still pursuing our goals, we'll always feel short of being self-actualized until we get there (since we mis-defined Actualized to be based on achieving milestones / goals), and therefore we're not really happy.

And finally, if we actually happen to accomplish a great goal while being purely goal-focused, we'll quickly be disappointed to find it didn't end all of our challenges / solve all our problems / give us ultimate peace after all our hard work. And we'll feel let down again, rather than fulfilled.

So again, goals Suck!

How do we live systemically, instead of goal-focused?

By making our lives Always fulfilled / by Always living an Actualized Life – every single day!

While we still can.

Too many people are caught up in believing silly ideas about life goals, etc, and in performing low-value tasks for most of their lives – without having much fun. And without being fulfilled.

Life is short – carpe diem!

Now, let's actually get Actualized!

Not Your Daddy's Maslow

By the way, the Actualized Life I'll explain next is quite different from the "Self-Actualization" that Abraham Maslow put forth in his psychological motivation theory on humanity's needs.

One major difference is in Maslow's implication that we have to achieve specific things before we can be fully successful.

In fact, his model estimated that only about 2% of all humans are truly self-actualized. Which means the other 98% of the world are a bunch of non-actualized failures.

Which is horseshit!

Voliberatism's contention is that almost all humans on the planet can have a fully Actualized Life / inner peace, and not worry if they'll live long enough to first build some sort of psychological pyramid.

You can achieve an Actualized Life today, in fact!

I know that doesn't seem right – because at this very moment there are a whole lot of people on our planet having a seriously lousy day – yet, what I'm telling you is true!

That's just One reason why Voliberatism is so cool. No, it can't prevent bad days, but it will help you deal with them positively.

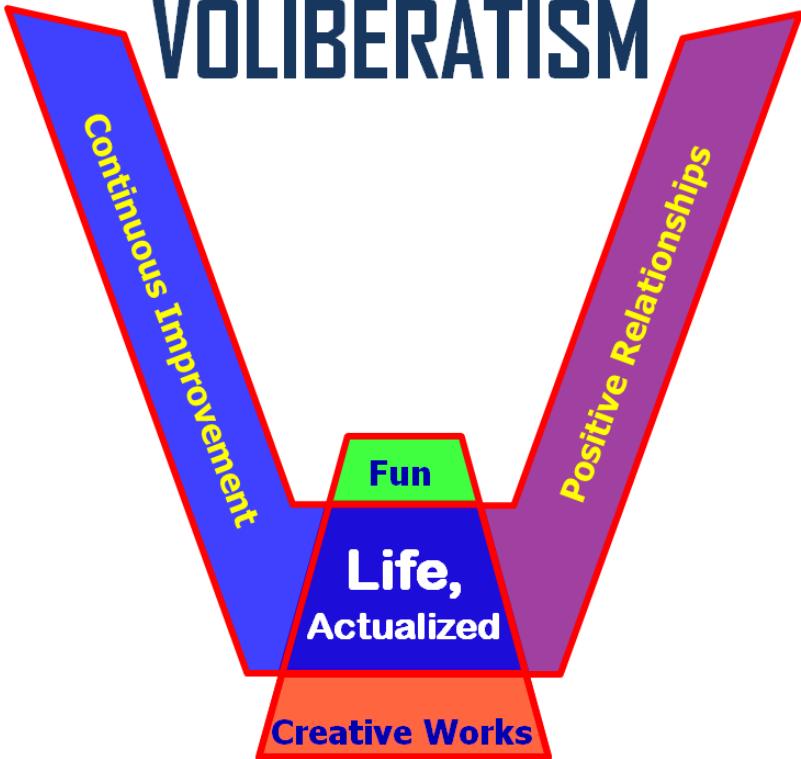

The How-To Guide for an Actualized Life

How VITAL is your life?

The astute will notice that per the following Venn diagram you can live an Actualized Life right away – Today, in fact!

That's because living an Actualized Life is about what you're Now doing – not about what you've Done.

VOLIBERATISM

**Voliberatism Interconnected Tranches of an Actualized Life
(VITAL)**

Here's some detail about the 4 tranches shown in the diagram (yes, you'll now look up the word, "Tranches"):

- 1. Continuously Trying to Improve Yourself, and Trying to Improve the Overall Circumstances for Yourself and for Those You Love**

Have you heard the term, "Survival of the fittest?" That's how life on this planet works. Staying in a particular caste / simply enduring the crap that life gives us without actively working to improve ourselves / our lot in life, is contrary to our natures / to the way life operates. If we stop Trying we can't be Actualized.

- 2. Cultivating Positive Relationships**

"Everyone has a (mental) breaking point," is true. And the easiest way to reach that breaking point is to have lousy relationships. The word, "cultivate," is used deliberately in this tranche; relationship cultivation sometimes requires pruning. Move towards relationships that make you feel good inside, and distance yourself from relationships that make you feel yucky.

- 3. Producing Creative Works**

Pride is the best thing in life – even better than sex for Sustained pleasure, i.e. anything more than a couple

minutes (ha, ha). This isn't the Pride of thinking you're better than others, e.g. as in a Jane Austen novel, or some Bible sin. This is Creative-Works Pride we're talking about; satisfaction of seeing progress on something you're working hard at, mentally and physically, deliberately doing it via a method of your own choosing.

4. Seeking Out and Participating in Fun Activities

Humans need Fun in their lives to be mentally and physically healthy – and Actualized. What you personally define / Do as Fun will be different than everyone else – it just can't be something detrimental to the world or anyone in it.

So it's as simple as this:

Working on micro-actions aligned with these 4 tranches each day will give you an Actualized Life.

Again, it's not about achieving particular goals in these areas of focus – it's about Effort. That's why it's possible to have an Actualized Life today / right now!

If you start today, and died tonight, you could still have lived an Actualized Life.

Now That idea is a Big Deal!

That idea alone is worth infinitely more than the price of this book (always mathematically true, since it's free, ha ha)! And it's an idea that makes you very hopeful for Fulfillment.

So Now What?

Having read this far, and assuming you're metaphorically capable of getting your ass off the couch, you now have enough knowledge to live an Actualized Life – today!

At this point the lazy among you can tell all your friends you've read Voliberatism, and you can now go play some more video games.

Yes, this is the stopping point for you lazy-asses – Vaya con Dios!

Or...

You can read on to learn how each of us can focus sufficiently on “important” things to escape from constantly being obsessed with seeking Meaning / to avoid being taken advantage of by tricksters who rely on your supposedly-inherent need to seek “Meaning” in life.

Plus, figure out Exactly what those “important” things are in your own life.

Your choice.

Part 2:

Why We're O-C Meaning-Seekers, and How
Meaning-Scammers Take Advantage of Us
Because of That Compulsion

Meaning It

Cool, you stuck around for Part 2 – good choice!

So... Sex and Food.

No, that's not the Meaning of Life (it just feels like it sometimes). Those things Are related to it, though.

Start here

There is No singular / universal Meaning of Life, and you'll never find Meaning if you seek it as something that could be found.

Just go with that idea for a minute – even if you aren't yet ready to trade in your long-standing beliefs otherwise.

And stop thinking about sex and food – just for a few minutes.

Even if you believe that a god created Humans in a day, I'm sure you'll admit that it must have taken that god quite a while to figure out how to do that.

At least on that one point you can agree with evolutionists; it took a long time for us to become Humans.

By the way, let's define those first humans simply as bipedal mammals having a sufficient amount of brainpower to think abstractly and start developing technology.

Actually, we can also agree that early humans had to work pretty hard just to survive.

Hell, that's already like 3 things about Human Origins everyone on the planet can agree upon – great start!

Why was life so hard back then (as opposed to now, when life is so easy, right)?

Because in order to not starve, and to have a chance of passing on our genetics, primitive humans had to exert full effort to compete for limited food, and for obtaining the breeding partners who we figured were most likely to produce surviving offspring.

At that point our primitive brains were very correct to determine that constantly seeking food, and mating, were “important,” and sought to encourage us to keep doing those things, even if it was hard (in order to survive).

Our brains did this encouragement by releasing the right type and amount of chemicals to reinforce doing-important-things behavior, i.e. causing us to feel Fulfilled / Actualized when we were Sufficiently focused on those “important” things, e.g. food and sex.

Over time, when it took less effort to obtain the food we needed, and our offspring were more likely to live without constant breeding, additional things became “important” to us, too.

For example, things which helped us get along with others in a community became “important” – things like providing security / protection, doing civil works projects, raising and storing food, sharing ideas (via language) to help with our daily plights and caring for our families, creating music to impress mates, etc – also became ingrained in our brains as “important.”

In other words, what the mind considers “important” has been added to over time. And the relative importance of different Life Factors varies from person to person. [More later, in Part 3]

One thing that hasn’t changed, though, is that our minds Must be frequently-enough focused on “important” things in order for us to get the correct dose of brain chemicals we need to feel Fulfilled / Actualized.

We’re all addicts, then!

Yes – kind of (in a good way).

Over eons we have all become addicted to focusing on “important” things (and receiving behavior-reinforcing drugs) – that’s true. And just like all addicts, we feel like something is missing when we don’t get our “Fix” often enough. We feel an empty feeling / void inside.

And here it is; that next mental leap:

Wait – is it about food and sex?

No! Seriously, I told you to stop thinking about that for a minute!

...Okay, fine; it’s a Little about food and sex.

Yes! Food and sex, ha ha! [some people really haven’t evolved]

And with the following concept, suddenly thousands of years of seemingly weird human behavior becomes more understandable.

We Misinterpret the emptiness we feel inside as a need to search for existential Meaning / Purpose; which emptiness comes from a lack of behavior-reinforcing neurotransmitters – due to insufficiently focusing on things our primitive-brain considers “important”

So, you ask, it's not some sort of “Meaning” we feel that we're missing; rather, it's simply a lack of behavior-reinforcing chemicals that doesn't allow us to feel Fulfilled / Actualized?

Yes, exactly.

So there is no special “Meaning” to be found Out There, and we're simply Misinterpreting a feeling of emptiness (from lack of brain-drugs) as a need to obsessively “Search for Meaning”?

Exactly!!

And this emptiness comes because that's the way our brains are telling us we're not Sufficiently focused on “important” things?

Yes.

Holy crap, that's **huge!**

All this time (for 1000s of years) philosophers and psychologists have been trying to figure out our Motivation for seeking Meaning, when really, they should have been questioning the actual Seeking Signal, instead – as a root cause. Crazy!

Yes, and now that you see it, you can't un-see it. And it becomes very funny to keep that in mind as you watch people argue about which idea about our Meaning seeking motivation is correct!

Here, I'll save you some time researching some of those well-studied arguments (listed in order from the most argued-for theory, and on down).

Remember, these arguments think they're cleverly addressing a Cause of Meaning-seeking – when we Now know they're really only addressing a symptom of Signal Confusion that humans Misinterpret as a “need-to-seek” for Meaning:

Mortality Awareness [yes, we all die – Duh]

Social Belonging [fit better in a society with homogenous Meaning]

Control / Predictability [with Meaning you can stop thinking – yay!]

Self Esteem / Identity [watered down / corrupted ikigai BS]

Purpose in Suffering [not just horseshit; this is elephant-shit!]

Legacy / Transcendence [few remembered after death – so what]

Moral Coherence [justify your morals by your pick of Meaning?]

Cognitive Closure [turn off your brain with the “right” Meaning??]

Existential Vacuum [wtf does that even mean?]

It's true that people have literally devoted their lives to solving this question of motivation for Meaning-seeking (and in many cases have made a good living selling you their theories).

And yet, we are literally Not desirous for Meaning at all – that whole concept is Bullshit! We just need more brain drugs, which we get from working on “important” things!

Correct. Think of it like this:

Working on “important” things is a System for an Actualized Life, while seeking-Meaning is just a large bullshit goal.

Phew! After That I Really DO Need More Brain-Drugs!

Yes, that's actually true – especially in modern life, since the time now required for many previously “important” things is minimal.

BUT you don't want to get them in the wrong way anymore.

You don't want them at the cost of creating your own cognitive dissonance to believe in a false Meaning for someone else's ultimate benefit – which actually limits your intellectual potential.

What??!

Yeah, keep reading.

Consequences

Since up this point (until this book) everyone has taken it for granted that seeking Meaning is part of our nature, 2 things have happened – both of which have been detrimental to all of us.

1. Some people jumped right to figuring out what makes humans special in their asking about Meaning – volunteering to either attribute supernatural / spiritual traits to humans, or deciding some divine entity, in its image, must have endowed humans with special gifts that allow us to appreciate existential Meaning differently than any other creature on Earth (rather than just realizing our brains are simply further evolved than other mammals).

These delusions may seem harmless; deciding we have invisible inner spirits that make us extra special, and allowing us Hope to see grandma again in a spiritual Afterlife doesn't seem that bad, right?

However, what if we think a god will take us home to Valhalla or Heaven with open arms if we die in battle, while fighting vigorously / not being worried about dying for our cause – when we've been (possibly incorrectly?) persuaded the other team is “bad” while we're “good”?

Or how about putting up with all kinds of hell on Earth because we have a glorious afterlife to look forward to as long as we do whatever we've been persuaded to believe is staying “righteous”?

Is it possible that all of that unprovable spirituality is true, despite what our logical brain is telling us?

Maybe. You have to Decide whether or not you choose to believe in all of that (knowing it can only be believed, via “faith,” but not proven).

Also, you have to understand that your intellectual performance / capability is hampered if you Decide to believe something, despite what your own observations and experience and logic may show you as contradictory to that belief.

And finally, you should also be aware that sometimes keeping your faith may require you to give of your time and money to, or even fight to the death for, a cause that is not fully transparent / logical to you.

Yet, if you’re fine with all those slippery-slope concerns, you’re not alone. 85-90% of Earth’s population are religion-followers and/or believe in supernatural phenomena. Upon reaching independence / adulthood, each of them had to consciously go through the same analysis you did to make that decision (unlike religious kids, who are indoctrinated by their caregivers without actually deciding).

2. The second consequence of taking it for granted that seeking Meaning is part of our nature, is that we’ve left ourselves wide open to people deliberately scamming us because of that supposedly “natural” tendency.

Those scammers quickly started making up ideas about what that existential Meaning really is, and persuading / giving others Their idea of Meaning as Correct / True – in order **to control** them.

How?

If we can be convinced we have found “Meaning,” then our brains give us reinforcing drugs **Almost** (but not quite) as if we were working on “important” things per our primitive brain.

Those internally-generated drugs are so powerful, that if we can convince ourselves we have Meaning / Purpose, we’ll put up with any level of illogical requirements in order to get them.

They’re so powerful, in fact, that even if we see we’re putting up with bullshit / understand we’re knowingly subjecting ourselves to something miserable or detrimental to ourselves **or to others**, as long as we can mentally re-affirm we have a Purpose, we’ll keep doing that craziness anyway!

About that “Almost” (but not quite)

Well, why is that a problem? What does it matter if we believe in some sort of bullshit somebody fed us, as long as we keep getting our brain-drugs so we can be Happy – by simply Believing?

Well, let’s instead ask:

“What does it matter if we create our own cognitive dissonance to allow ourselves to repeatedly re-affirm Purpose to get our brain-drugs – despite our own observations, and despite our brains’ own logic-checking mechanisms telling us that what we’re justifying actually Doing for that Purpose isn’t good for us (or others)?”

Whoa – weird; that’s kind of reminiscent of questions people were asking in those Nuremberg Trials a while back.

Oh. Shit.

Meaning Over Mind

Those Bastards!

Yes. This is exactly the mechanism that Manipulators have been using forever, to get people to do shit for them (even horrible shit) / make them money, etc.

Does that piss you off, maybe just a Little bit? **Good!**

Let's "Break that down a little," as they say in the corporate world. Also, let's work this mechanism-problem backwards as an engineer would, from desired end result, back to initial conditions / raw material.

Making your own Following

Starting with the Manipulators' desired end result; they want people to become subservient to them, convinced to believe in the Manipulators' bullshit Meaning / Purpose enough that those now-subservient people will help the Manipulators get money, sex, power, etc.

By the way, the Manipulators don't give a damn that their Meaning-scammed minions are working at Less than their true potential due to the fact that those people are in a state of self-induced cognitive dissonance (clinically true performance phenomenon – look it up).

Nor do the Manipulators care if after a long period of doing shit that's ultimately not healthy for the minions, many of the minions

will burn out or get sick, or eventually just stop working – because they can always get more minions if they do it right! Ever hear of P.T. Barnum's, "There's a sucker born every minute"?

As for initial conditions, the only raw materials needed to make minions / your own Following are a persuasive Purpose statement, and the reinforcement-drug starved minds of people scrolling away their days on their phones instead of consistently doing the simple, "important" micro-actions they should be doing.

Those people / victims are Misinterpreting the emptiness they feel inside (from lack of brain-drugs), for the need to begin a Seeking-process to "Find Themselves" / "Discover Who They Really Are Inside" / "Learn God's Plan for Them" / "Obtain a Perfect Work-Life Balance" / otherwise seek for existential Meaning.

Yes, those potential "Meaning-Scam" victims are ripe for the picking!

Just like all junkies deprived of drugs, they'll do Anything to get their fix – even if it means inducing their own cognitive dissonance.

Even if that Manipulator's Meaning-Scam causes them to do things they wouldn't otherwise do if they didn't have cognitive dissonance.

By the way, despite our modern sophistication, it's actually getting Easier to play mind tricks on people – because we lazily do less and less of the things our primitive-brains would consider "important" nowadays, making us more likely than ever to cave in to trickery.

Just think of how easy it'll be to make Meaning-minions once we can sit on our asses all day and rely on AI-powered robots to do our work!

A long time ago... in a galaxy not far away

Can this idea really explain many aspects of human history which have heretofore been confusing?

Consider Egyptian prophets justifying generations of non-rebelling slaves to build phallic edifices for little-boy pharaohs and their advisors (actually for Ra, of course). Manipulators controlling people.

How about Crusaders sharing the gospel / obtaining new lands for resources – by killing people? Manipulators controlling people.

Then we progress to Industrial Age mega-tycoons using forced-child-labor to sew pants (to keep those urchins out of trouble – for their own good). Manipulators controlling people.

Next, consider company-founding, down-level overseers recruiting “distributors” / “affiliates” in multilevel marketing schemes (yes, you too can be a business owner). Manipulators controlling people.

Or more lately, 35 year-old Mom’s-basement dwellers posting AI-generated stories on LinkedIn about making lots of money online, which, for the cost of an AI-generated instruction guide (1/2-off, today-only, for just \$39.99) – can teach you how to make AI-generated instruction guides, that you can then easily sell to people by mass-distribution via AI-generated stories on LinkedIn – to people who want make money creating AI-guides they can sell online via AI-stories, ..., etc.

All so the basement-dweller can impress hopeful-sex partners with a car (it’s their only hope to get laid, after all) – paid for by You!

Yes, over thousands of years people and institutions have gotten Very good at taking advantage of us because of our incredibly powerful, drug-induced compulsion to seek Meaning.

Because if we believe we have the Correct Meaning, we can suffer through almost anything – and still be okay with it!

We'll somehow think it's "Worth it," for whatever brainwashed reason we sell ourselves – which is powerful enough to even overcome our own logic / objectively negative personal experience.

As Friedrich Nietzsche stated, "He who has a Why to live can bear almost any How".

Is it all bad?

In the sense that you're being controlled and therefore not reaching your personal potential, absolutely **Yes**.

However, if intent matters, some Manipulators had good intent in controlling their minions, e.g. starting religions to help unify and organize people to advance early civilizations, for instance.

Specific to early religion, then, we should be glad our ancestors were controlled by religion founders – way back then, at least. So being controlled isn't 100% bad in that (edge) case.

Of course, there Was also that whole Crusades thing. Perhaps an Inquisition. Various genocides and massacres. Witch burning. Televangelists. Thousand-year holy wars, ...

Definition: the “Meaning-Scam”

At the time of this writing, “Meaning-Scam” is a new, unique, previously-undefined term – and it’s critical that we understand it as a specific type of scam before we continue further.

Because of the intense power of our brain’s internally produced drugs e.g., dopamine, etc – used to reinforce “important” pro-survival behavior in early Human development – we actually stimulate release of those brain-drugs by taking micro-actions on things our primitive-brain considers “important,” and can thereby immediately be living what we consciously consider to be an Actualized / Fulfilled Life.

Further, when we do Not focus sufficiently on things our primitive-brain considers “important,” the resulting lack of behavior-reinforcing drugs causes us to feel an “emptiness” inside us, like “something is missing / wrong” (like any drug addict without their “fix”), as a Signal that we need to focus on “important” stuff more frequently.

We then Misinterpret that Signal as a “need-to-search” for some sort of existential Meaning (to feel Whole inside, again).

Although until now (in reading this book) we didn’t understand the actual Mechanism that causes humans to start searching for Meaning, some humans Have indeed previously recognized (for thousands of years) how very motivated we are to search for Meaning (because it’s powerful-drug-induced), and have sought to use that intense motivation to control others’ behavior –

sometimes with good intent, but usually with intent for personal benefit.

They (we'll call them Manipulators) do this by providing others with a viable-seeming Meaning / Purpose that causes those others (we'll call them Victims) to act in a way to benefit, or be controlled by, the Manipulators.

The Victims will often still grasp at / accept the Manipulator-prescribed Purpose / Meaning, even if the actions required to pursue / accept that Meaning / Purpose are ultimately detrimental to the Victims or other people (bystanders, unbelievers, "enemies", down-line, etc).

The Victims do this because in pursuing / accepting a viable Meaning, our primitive-brains are tricked into producing the same pro-survival action-reinforcement drugs which would normally cause us to live a truly Actualized Life (all the time!) when we're sufficiently pursuing things our primitive-brain considers "important" – while in reality our brains are being tricked into feeding us drugs that make us feel good about following some Manipulator's prescribed Meaning (allowing them to control us).

The way a Victim can overlook potentially detrimental effects of pursuing / accepting a seemingly-viable Meaning / Purpose, is by self-inducing cognitive dissonance – which happens when our mental Drive is powerful enough to cause us to ignore pertinent inputs (even if they seem obvious to bystanders around us). In this case that Drive is caused by lack of brain-drugs – and nothing effects the human psyche more than that.

The results of us falling for Meaning-Scams are:

- The Victims willingly accept control by and / or provide benefits for, the Manipulators
- The Victims operate at less than their full mental capability because of their self-induced cognitive dissonance

And as an additional negative result, when the Victims spread their false-Meaning to others (so the Victims can feel better about the crazy stuff they're doing or believing – people with cognitive dissonance tend to try to justify their behavior), it's quite possible that the Victims then become Manipulators for a new set of Victims, further spreading the Meaning-Scam.

And now that you know how all this works, don't be surprised if you examine yourself and find that you're a Meaning-Scam Victim, too.

Ready to be scared a little – and maybe a little pissed-off, too?

Let's take a look at some potential Meaning-Scams.

Meaning-Scam Detection

As Mark Twain once said, “It ain’t what you don’t know that gets you into trouble. It’s what you know for sure that just ain’t so.”

For Manipulators, that’s the most beautiful thing about Meaning-Scams – their Victims rarely find out they’re being scammed.

We’ll fix that right now.

AI as a useful Meaning-Scam detector

Many people worry that AI LLM tools have gotten so good about pretending to be human that it’s hard to know for sure if you’re talking with a human or not (and they’re right to worry – as we’ll discuss later). [and AI-generated deep-fakes and fake videos are even scarier than just the talking fake]

However, AI tools are still just mimicking human behavior / human emotion – which is actually very useful. We can use the fact that AI never worries about Meaning and doesn’t have real emotions, to help us detect Meaning-Scams we might not easily recognize.

Here’s a quick way to do this:

Copy and paste Part 2 of this book into your favorite AI tool, and then ask it to identify potential Meaning-Scams in other information you feed it. Try political speeches, self-help strategies, news stories, religious sermons, corporate Engagement plans, etc.

Here's an example of how this works:

Grok devours corporate Engagement “benefit”

Grok (by xAI) just digested the explanation of how Meaning-Scams work, and was asked to examine a common modern Engagement program through that lens – only as a “Potential” scam to keep it from being overly biased because of prompt context.

For the company Benefit of “Unlimited PTO and ‘Flexibility’”, predicted outcomes were requested for:

1. Common components of this particular program
2. Detailed mechanism of how it would influence employees, including its potential to cause them to self-induce cognitive dissonance to buy into its touted benefits
3. Likely effect on employee performance, short and long term
4. Likely effect on overall corporate profitability with all other factors unchanged

Below is the output from Grok (with no editing except format):

Unlimited PTO & “Flexibility” (~160 words)

1. Common components

No-accrual policy, “take as needed,” async promises, subtle shaming channels, town halls, and “Own your time” slogans.

2. Detailed Meaning-Scam mechanism & cognitive-dissonance induction

Vends Purpose: “Elite freedom via self-management.” Dopamine from autonomy illusion; peer pressure triggers void. Dissonance: Redefine overtime (“ownership”) to ignore boundary erosion.

3. Likely effect on employee performance (short/long term)

Short: 5–12% agency-driven surge.

Long: Hyper-vigilance burns out, dropping 20–40% by year two; decisions degrade.

4. Likely effect on corporate profitability (*ceteris paribus*)

Short: 1–3% liability reduction.

Long: Unpaid hours and attrition cut profitability 4–8% after 18 months; harvests life-hours via “freedom.”

Fun stuff, right?! Now go try you own company’s HR programs.

The manual detection method

For those of you who like checklists, here’s how to detect Meaning-Scams the Old-School way.

To examine things as potential meaning scams, ask yourselves the questions in the following table.

If you see 3 or more of these warning signs in a real-world example, then there's a strong likelihood you're looking at a Meaning-Scam.

Warning Sign:	What it looks / feels like:
Void-First Hook	Starts by amplifying the feeling of "something is missing," before offering the solution. Similar to: "Do you ever feel like life has no real purpose?"
One True Answer	There is a single Meaning/Path/Truth that explains everything and fixes the void forever
Identity Fusion	Your worth or salvation is tied to total loyalty to the group, leader, ideology, or product - leaving would be considered an existential catastrophe.
Path of Sacrifice	The more you suffer, give money, cut off family, or endure humiliation, the more it "proves" you're on the right path.
Cognitive Dissonance Immunity	Obvious contradictions or failed predictions are reframed as "tests of faith," "necessary growth," or "you just didn't believe hard enough"
Us versus Them Salvation	Only We have the real Meaning - everyone else is lost, or evil, or not quite there, yet. Creates an instant in-group high.
Dopamine Debt and Payoff Delay	Emotional high from belonging or becoming "enlightened," with endless promises for a wonderful future if you keep paying / investing time, etc, e.g. heaven, revolution, financial freedom, transcendence
Thought-Stopping Slogans	Mantras that shut down questioning, e.g. "Trust the Plan / Process / Shepherd," "You're overthinking," "Just surrender"
Personalized Mirroring (especially AI-era)	The offered Meaning feels especially tailored to your specific insecurities, browsing history, or recent searches
Exit Cost Escalation	The longer you're in and the more you've invested (time, money, identity, relationships), the worse they say it will be if you ever leave

In general if you feel a quick rush of, “yes, someone finally understands,” and then pressure to commit more money, time, etc, before you even test the claim, then that (brain-drug) rush you’re feeling is likely manipulated.

Just so you don’t get too paranoid, most social / hobby / exercise groups, and legitimate philosophies don’t trigger more than 2 of those warning signs, e.g. motivational speeches, the better self-help books, and early-phase business startups.

Here are examples of things in many people’s lives which should be evaluated:

- Working in a Grand-Purpose company 80+ hours per week with no overtime
- Politics: support your neighborhood politician with signs in your yard, and you Must choose a conventional Party to make a difference in an election (despite likely corruption in all Parties)
- Supporting a sports team despite 20 years of shitty performance
- Following “Reality” shows
- Taking sketchily-tested, highly-profitable (to the companies) pharmaceuticals to avoid possible illness at all cost, no matter the risk – because the million-dollar ads seem to make sense
- Religion: distinct “levels” of righteousness / understanding / expected behavior based on how devoted or faithful the individuals are, as perceived by other members or leaders
- Devotion to any media “news” outlet (with their payment models set up to get you mad / riled or overly excited)

- Scrolling social media “Suggested” content for a dopamine trickle
- Chasing the American Dream or international equivalent (despite the fact that corrupt politicians and oligarchs have made the economics of that Dream impossible for decades)
- Calling acquaintances “Comrades,” or addressing non-relatives as “Brothers” / “Sisters”
- Protesting something because your friends are doing it

Etc – you’re probably getting the idea by now.

“Be Prepared”

In Part 2 we've learned a lot – hopefully to open our eyes to spotting Meaning-Scams that have been going on for literally thousands of years.

It's a little disconcerting, right?

Now you're thinking, “What happens as AI increasingly assists Manipulators to weaponize their persuasion games with a near-infinite database of applicable, logical-sounding arguments to counter any potential objections, such that most Victims will soon be actively Begging those Manipulators to be taken advantage of?”

How the hell can we be prepared for that, i.e. is there a sure way to prevent falling for each of those Scams, going forward?

Sadly, no.

Just as a less-than-infinite amount of vaccines cannot prevent every new strain of possible illness, there is no way to prepare specific defenses against every possible Meaning-Scam every one of us might succumb to.

Yet, there is a solution!

Bottom-line-up-front: we Must focus on “important” stuff often enough that we receive a sufficient stream of behavior-reinforcing, brain-produced drugs to live an Actualized Life all the time.

That alone prevents the deep emptiness we might feel (due to brain-chemical deprivation) which could cause us to create enough of our own cognitive dissonance, that we grasp at false hope via Meaning-Scam painkillers.

Part 3 helps us prioritize which aspects of our custom-weighted list of “important” Life Factors we should focus on first, second, and so on – as part of building our personalized plan of Life-Actualizing micro-actions.

If we’re Constantly living an Actualized Life (getting all the behavior-reinforcing drugs we need to avoid that miserable feeling of “emptiness”), then we’re Much Less Prone to falling for trickery.

Read on, my friends!

Part 3:

Pick Your Poison

(How to Choose Your Own “Important” Stuff)

The Important Stuff

There exists a whole subset of philosophy on “Decision Theory” that suggests mathematics-based methods for making difficult rational decisions using incomplete data.

Since its purpose is to make decisions objectively, any decision-making methodology which introduces subjective influence is appropriately discounted in formal Decision Theory.

However, in making decisions about what Life Factors are “important” to our pre-language primitive-brains, purely-rational methods fall short.

That may sound funny coming from an engineer, but it’s also funny that in just a few pages of Part 2 we turned thousands of years of arguing about Why humans continuously desire to pursue Meaning into a moot point (we’re actually Not desirous to pursue Meaning).

And now we’re going to revive the usefulness of a decision-making method which is near-universally criticized as at least somewhat subjective – the Weighted Decision Matrix (WDM).

It’s true; it’s subjective – and it’s also Exactly the tool we need to coax our brain’s inner, primitive, varying-by-individual, “important” desires out in the open; into our conscious mind, that is.

Why does a WDM work, you ask? Because the WDM requires just enough behind-the-scenes math that our conscious brain isn’t trying to influence the outcome purposely, as we weight the relative importance of “VITAL-27 Life Factors” in setting up the

WDM for its analysis. Yet, again, its outcome relies on us – subjective humans – to establish its criteria for calculations.

That element of subjectivity is especially true for this particular, Voliberatism-version WDM, because in addition to our own subjective Ratings, we're also going to use 2 columns of subjective Weightings – not just the single Weighting column of most WDMs.

This means that while we're consciously thinking of being objective when we're setting this up, we're actually injecting our deep-down subjective preferences into the matrix, too.

Hey, you – wake up!

Yes, I mentioned math, and 1 other kind-of-nerdy point about a matrix, and you immediately fell asleep!

What, you think everything is as simple as having an App? You're saying you want a free, no-ads App for that?

Yeah, me, too; and even before that's built, there's a free, pre-built Voliberatism WDM spreadsheet (MS Excel) linked at the end of this section that will definitely save you a few minutes.

However, please still read this section before jumping to the link, because there's some underlying context you should understand, too.

Below, I'll show you how to set up your WDM to find and prioritize work on Your own Most “important” VITAL-27 Life Factors – for maximum, near-instant brain-drug reinforcement.

VITAL-27 Life Factors

The “VITAL-27 Life Factors” identify “important” life aspects common to every human.

These Factors also align with the Voliberatism Interconnected Tranches of an Actualized Life (VITAL) from Part 1, with every one of the VITAL-27 Life Factors primarily associated with At Least 1 of those Tranches. As a reminder, the 4 Tranches of the VITAL diagram are:

- Continuously Trying to Improve Yourself, and Trying to Improve the Overall Circumstances for Yourself and for Those You Love
- Cultivating Positive Relationships
- Producing Creative Works
- Seeking Out and Participating in Fun Activities

Here's a table of the VITAL-27 Life Factors and the primary Tranche aligned with them (they're listed in no particular order because everyone values these Factors differently):

VITAL-27 Life Factors	Primary VITAL Tranche
Health and Fitness	Continuous Improvement
Learning & Skill-Building	Continuous Improvement
Finances	Continuous Improvement
Career Satisfaction	Continuous Improvement
Preparation for Demise	Continuous Improvement
Romance / Intimacy	Positive Relationships
Nuclear Family Relations	Positive Relationships
Extended Family Relations and Friendship	Positive Relationships
Mentoring & Teaching	Creative Works
Communication & Privacy	Positive Relationships
Avoiding Annoyances	Continuous Improvement
Creative Activities	Creative Works
Challenge / Achievement	Creative Works
Personal and Home Organization / Simplification	Continuous Improvement
Dwelling Suitability	Continuous Improvement
“Typical” Days as Desired	Creative Works
Passive Fun Activities	Fun
Active Fun Activities	Fun
Elective Travel	Fun
Nature Interaction	Fun
Mental Resilience Activities	Continuous Improvement
Grooming and Hygiene	Continuous Improvement
Emergency Preparedness	Continuous Improvement
Exploration	Fun
First Aid	Continuous Improvement
Primitive Physical Capabilities	Continuous Improvement
Personal Defense	Continuous Improvement

Building Our WDMs (Not WMDs – Please Don't Send the Troops!)

Below is the step-by-step method to assemble our Weighted Decision Matrix, to best convince our primitive brains we're focusing sufficiently on "important" stuff with just a few initial actions.

This will quickly get us the brain-drugs we crave / eliminate the feeling of emptiness we misinterpret as a need to seek Meaning / allow us to immediately live an Actualized Life!

Enter Weightings and Ratings

Let's build a sample Voliberatism WDM together (for clarity, this example uses only 3 of the VITAL-27 Life Factors):

First, put the VITAL-27 Life Factors in the left most column of a table / matrix / spreadsheet (cut and paste from this e-book).

In the 2nd column, for Tranche Factor Value, decide how many of the 4 Tranches each Life Factor touches upon when you visualize Your Own mental image for what that Life Factor describes (this is totally personal to you; which is why examples for each Life Factor are not provided, by the way – to not influence your flow of ideas).

The first 2 columns of the table will now look like this:

VITAL-27 Life Factor	Tranche Factor Value
	Use 0.3 for 1 tranche touched Use 0.5 for 2 tranches touched Use 0.7 for 3 tranches touched Use 0.9 for 4 tranches touched
Health and Fitness	0.5
Challenge / Achievement	0.9
Nuclear Family Relations	0.5

In this case we decided the VITAL-27 Life Factor of Health and Fitness aligned with 2 of the VITAL Tranches from Part 1 of the book.

Specifically, we pictured an image of “rock climbing” in thinking about Health and Fitness, which touched 2 of the VITAL Tranches – the Continuous Improvement tranche, as well as the Fun tranche.

The Tranche Factor Value in column 2 is 0.5 since Health and Fitness touches 2 of the VITAL Tranches (a Life Factor touching 2 tranches makes the Tranche Factor = 0.5 per the Key in column 2’s heading, above).

Next, in the 3rd column, enter 4, 5, 6, or 7 for how “important” you consider each Factor (with 7 being the most important). All of these Factors are important, so 4 is our minimum.

Now our WDM looks like this:

VITAL-27 Life Factor	Tranche Factor Value Use 0.3 for 1 tranche touched Use 0.5 for 2 tranches touched Use 0.7 for 3 tranches touched Use 0.9 for 4 tranches touched	Subjective Weighting (4-7)
Health and Fitness	0.5	7
Challenge / Achievement	0.9	6
Nuclear Family Relations	0.5	7

For column 4, you would then enter each Factor's Weighted Importance, which is found by multiplying the value in column 2 by the value in column 3 – like this:

VITAL-27 Life Factor	Tranche Factor Value Use 0.3 for 1 tranche touched Use 0.5 for 2 tranches touched Use 0.7 for 3 tranches touched Use 0.9 for 4 tranches touched	Subjective Weighting (4-7)	Weighted Importance (= Subjective Weighting * Tranche Factor Value)
Health and Fitness	0.5	7	3.5
Challenge / Achievement	0.9	6	5.4
Nuclear Family Relations	0.5	7	3.5

Then, in column 5, you decide how many "Stars" (1 through 5) you would give yourself on how you're Currently doing for each Life Factor – as compared to what you would consider ideal (with a 5-Star rating as best / ideal).

For instance, if you were rating the "Dwelling Suitability" VITAL-27 Life Factor, you might give yourself only 1 star if you're currently

incarcerated in a Turkish prison (very sucky), versus 5 stars if you are living in a modern tree-house on a beach in Hawaii (ideal).

Like this (for our current example):

VITAL-27 Life Factor	Tranche Factor Value Use 0.3 for 1 tranche touched Use 0.5 for 2 tranches touched Use 0.7 for 3 tranches touched Use 0.9 for 4 tranches touched	Subjective Weighting (4-7)	Weighted Importance (= Subjective Weighting * Tranche Factor Value)	Current Performance Versus Ideal Performance (1-5 stars)
Health and Fitness	0.5	7	3.5	3
Challenge / Achievement	0.9	6	5.4	3
Nuclear Family Relations	0.5	7	3.5	2

Great!

We now know the relative importance of all the VITAL-27 Life Factors (if our example table had done this for all 27 – yours, of course, will weight and rate all 27) – specific to YOUR own primitive brain!

Now we just have to prioritize where you focus your actions 1st, 2nd, etc.

That's exciting!

[Note: if all this seems tricky / seems like there might be a less complicated way to quickly choose importance – You're Right! This is Intentionally tricky to shuttle your deep, primitive-brain's subjectivity past your logical, conscious-brain's gate-keeping]

It's Time to Get Us a Little Action!

Action – yes! That means Brain-Drugs are coming soon!

Exactly!

Specifically, it's time for some itty-bitty micro-actions.

Why micro-actions?

Because they're quick, and we want our drugs Now, that's why.

The quicker we get brain-drugs (for the Right reasons), the quicker we'll have an Actualized Life.

And with an Actualized Life, we're resistant to Meaning-Scams.

It's time to get Actualized, baby – let's Do this!

Now finish that damn table!

This part's fairly easy, so we'll be done in a jiffy – whatever the hell that means.

Our last column, the 6th column, will show us how we should prioritize doing our micro-actions. Again, we'll feel our hit of brain-drugs quicker if we start with our highest priority micro-actions.

To prioritize which VITAL-27 Life Factor we should work on first, simply look for the biggest number in column 4, the Weighted Importance column.

The Life Factor with the highest Weighted Importance will correspond to Action Priority #1, which we'll enter in column 6.

Like this:

VITAL-27 Life Factor	Tranche Factor Value Use 0.3 for 1 tranche touched Use 0.5 for 2 tranches touched Use 0.7 for 3 tranches touched Use 0.9 for 4 tranches touched	Subjective Weighting (4-7)	Weighted Importance (= Subjective Weighting * Tranche Factor Value)	Current Performance Versus Ideal Performance (1-5 stars)	Action Priority
Health and Fitness	0.5	7	3.5	3	3
Challenge / Achievement	0.9	6	5.4	3	1
Nuclear Family Relations	0.5	7	3.5	2	2

If there's tie for a Life Factor priority based on Weighted Importance (as shown here with Health and Fitness being tied with Nuclear Family Relations, at 3.5 each), then to address our most-deficient Factors first, the Factor with the lowest Star Rating should have the higher Action Priority number.

Notice that Nuclear Family Relations is Action Priority 2, while Health and Fitness is Action Priority 3.

That's it!

Our WDM is complete and we know where to start.

Bring on the brain-drugs!

Acting small, winning big

Now we're ready to start taking actions on our VITAL-27 Life Factors – based on the priorities listed in column 6.

However, before we get to that, I've got a surprise for you...

You're already living an Actualized Life – right now!

Remember (from Part 1) that we agreed goals were bullshit – because we can die at any time / before we reach Any goals.

Since it's Not okay to die without being Actualized, that means we have to live an Actualized life **constantly**.

Wait; isn't that hard?

Nope!

I personally crash-tested that principle for you in my near-death airplane rollover.

When I got off the plane I found that since I was already living the philosophy of Voliberatism prior to the crash (even before Voliberatism got its name), I didn't have to change a thing about my lifestyle, even after the near-death mental refocus we all do after those situations – because I was already living an Actualized Life!

Again, that's not because everything is perfect (yeah, right – more like Chaos most of the time), but I am constantly working on micro-actions per the VITAL-27 Life Factors – and therefore I'm getting my near-constant dose of brain-drugs.

Therefore I'm Always living an Actualized Life!

And the reason YOU are now Currently living an Actualized Life, is because Right Now you are taking action aligned with the Continuous Improvement tranche of Voliberatism (per the VITAL-27 Life Factor of “Learning and Skill-Building”) – just by reading this book!

Congratulations!!

Seriously, though – can you feel it? A little more positivity?

Excellent!

Alright, back to work

Bringing us back: we've just written priority numbers for all the Life Factors in the Action Priority column.

Now it's time to take some micro-actions. Again, even a tiny amount of progress on “important” things will cause your primitive-brain to release chemicals to reinforce your taking action on those things.

Let's look at our example – here's our completed sample WDM again, for your easy reference:

VITAL-27 Life Factor	Tranche Factor Value Use 0.3 for 1 tranche touched Use 0.5 for 2 tranches touched Use 0.7 for 3 tranches touched Use 0.9 for 4 tranches touched	Subjective Weighting (4-7)	Weighted Importance (= Subjective Weighting * Tranche Factor Value)	Current Performance Versus Ideal Performance (1-5 stars)	Action Priority
Health and Fitness	0.5	7	3.5	3	3
Challenge / Achievement	0.9	6	5.4	3	1
Nuclear Family Relations	0.5	7	3.5	2	2

Action Priority 1 shows that we need to take a small, immediate action on the Challenge / Achievement Factor as our first priority.

Actually, just by working on this table we already made progress aligned with Challenge / Achievement! Good job!

If we wanted to take another action for that same Factor, we could picture a cool challenge we'd like to do someday – like maybe participating in a triathlon. Just visualizing that is a micro-action, really, and standing up right now to stretch would be another one.

[Like I did just now, as a 10-second break while typing this sentence – thereby slightly increasing my flexibility for a possible triathlon. And hey, I really DO feel a little better, mentally AND physically!]

Follow Directions

By the way, using the Challenge / Achievement Factor in our example was done on purpose – because it's the VITAL-27 Life Factor that most people would say encourages us to set “goals.”

That makes it the best Factor to use for illustrating the difference between setting a Direction versus a Goal.

When it comes to living an Actualized Life, orienting ourselves in the Direction we should be moving is all the Action we really need.

Do you remember the movie, “Cast Away,” starring Tom Hanks? At the very end, after having reevaluated what’s important in his life, the main character is standing at a crossroads (literally and figuratively), and is turning slowly around (facing each road direction / option for a few seconds each), in deciding what to pursue next.

If you watch closely you’ll see that at his last turn, he chose to pursue the important VITAL-27 Life Factor of Romance / Intimacy, just by turning in the Direction of the welder-lady who stopped her truck to take an interest in his plight, and whose shipping box was so symbolic to him on his island.

Right then, if a tornado appeared and killed him (the flatland location suggests those are possible), he would have died living an Actualized Life. Choosing his direction was all it took – and the music and his facial expression helped you Feel that in the movie.

[Whoa; I just realized that movie example, which came to me only seconds before I wrote this, was also about a person's perspective changing – after a Plane Crash!]

"Okay," you say, "but what about making significant progress on a Challenge / Achievement; isn't that important, too?"

No, not really – not for being Actualized. Any small action on any of the VITAL-27 Life Factors will cause our primitive-brain to produce the behavior-reinforcing chemicals we need.

Here's what you're really asking: Would it be "worthwhile" to make significant progress while moving in the direction of your selected challenge? You bet!

Let's say you decided you were going to work towards doing a 10 kilometer obstacle course race as a personal challenge. Simply in deciding to do that, your life became Actualized.

After your first training pushup your health starts improving. Every step toward your event has a positive effect on many "important" aspects of your life – so yes, that's all Absolutely worthwhile.

If lightning had struck you right after you decided to work towards that event, though, in terms of an Actualized Life, you would have already won!

Cool, right?!

Just for fun, though, let's continue with micro-actions for the Factor of Challenge / Achievement, and suppose we had decided working towards doing that 10k obstacle course race was the direction we wanted to go.

Maybe a tiny step after making that choice (that we could do during breakfast before going to work, for example) would be to look at a 30-second video of how someone did one of the obstacles we'd be doing.

More micro-actions might include:

- Looking up how to warm up and stretch properly
- Actually trying a couple of stretches
- Stretching 2 days in a row
- Downloading and printing out a day-by-day training plan
- Trying on a pair of running shoes

And so on. Tiny steps / micro-actions.

What if your selected Challenge is to take a top-5 finish in the next obstacle course racing world championships?

NO, that's a "goal," implying that success requires some sort of specific outcome.

Theoretically, a final micro-action could actually lead to a top-5 finish, though.

Perhaps you were already running in that championship race in position 6 and you decided, as a micro-action, you would make your final pull on the obstacle rope just a second longer than the pull before it; and when you did that, you happened to pass the next person ahead of you and finished 5th.

Placing 5th wasn't your focus – but you got there as you focused on the rope pulling micro-action.

In other words, Yes, take tiny steps, and also, Yes, success from one micro action / tiny step can lead to more success on further steps.

Let's go nuclear

Okay – we've addressed the Challenge / Achievement Life Factor:

Check!

What's next?

Ah, now we need to do a micro-action for Nuclear Family Relations.

How about a quick text from work to your significant other, saying,
“I’m sorry I was a jerk this morning?”

Yes, that would produce excellent brain-drug feedback – and your life would be instantly Actualized!

“Impossible,” You Say; Too Easy!

What, you want to go back to achieving certain goals to be Actualized?

Hell no!

Let’s say that lightning strikes your house and kills you 10 seconds from now (or your plane crashes). Do you think you’ll die unfulfilled, just because you’re only halfway ready for your first marathon?

No, not if you’re actively working on your VITAL-27 Life Factors!

If you are Volitionally working on the Factors you Deliberately choose to address, you are immediately living an Actualized Life!

When you do that, it truly becomes the Direction that counts in your life, versus some damn arbitrary goal.

Finally...

When you feel Actualized (judged by feeling no inner emptiness – because you’re getting all the behavior-reinforcing brain-drugs you need), then you Won’t be quick to quest after some illusory Meaning.

And you’ll therefore be less easily tricked by some Manipulator’s Meaning-Scam!

3 Parts down

Was this book worth reading so far? Let's judge.

It promised solutions to 3 of life's most challenging ongoing struggles:

1. Question: How can we live an Actualized Life, immediately?

Answer: Take any small step in working on something your primitive-brain considers "important."

2. Question: How do we avoid getting taken advantage of by Meaning-Scams, and why are we more susceptible to that bullshit when we're not working on micro-actions to live a constantly Actualized Life?

Answer: We learned that we're Misinterpreting the emptiness we feel inside as a need to search for existential Meaning / Purpose; which emptiness comes from a lack of behavior-reinforcing neurotransmitters – due to insufficiently focusing on things our primitive-brain considers "important."

Once we realize it's not Meaning we're looking for and start doing micro-actions on VITAL-27 Life Factors, we then see Meaning-Scams much more clearly – and for help, we now have a Meaning-Scam Warning Sign checklist, and an AI-assisted method (feeding this book into an LLM to show it the Meaning-Scam pattern / definition, and then asking it to point out non-obvious concerns).

3. Question: How do we find out what our primitive-brain considers as “important” Life Factors, so that we can be rewarded by our primitive-brain’s behavior-reinforcing mechanism (giving us the brain-drugs we need for an Actualized Life)?

Answer: Use a Voliberatism (extra-subjective) version of a Weighted Decision Matrix to reveal what our primitive-brain considers as “important,” and work on those “important” things, in proper priority order, with micro-actions.

Hopefully you’re happy with these answers, however, don’t forget that if you’re dissatisfied, you’ll receive back 10,000 times the purchase price of this \$0 (free) book!

Only 1 more Part to go!

The last thing we’ll talk about in this book (before the “boring” formalized-philosophy Appendix) is specific to our urgent need to mentally arm ourselves against the extraordinarily powerful, AI-assisted Meaning-Scams that Manipulators will be using in less than 2 years.

Fortunately, we practitioners of Voliberatism will be ready (as much as humanity can be, anyway)!

Link to the free, pre-built Voliberatism WDM to save you time:

Part 4:

Resistance is (Not) Futile!

How to Survive the Coming AI-Assisted
Meaning-Scam Apocalypse

Shock and Awe Meaning-Scams

80% of everyone alive today are unlikely to recognize that characteristic modem-handshake internet-connecting sound, pre-broadband (unless they've recently watched the 1998 movie, "You've Got Mail," which prominently featured that sound in its opening credits).

Which means that right now, nearly Everyone on Earth is constantly leaving digital clues, or "data-exhaust," strewn about our high-speed internet.

At this very moment, market analysts across the world are using data-harvesting, supercomputer-processing, AI-agents to build and sell behavior-predictive digital-twins of You, with all your personal and familial characteristics, financial details, and intimate secrets – to the highest bidder.

And guess what that highest bidder has to currently pay for all of your individual, fully characterized data-exhaust?

About \$0.10 USD, with that cost dropping by 30-40% in the next 2 years – even as the predictive behavior model (of You, personally) gets at least 50% more accurate in that same timeframe.

That's the Legal profiling that's happening, anyway. There's also this brand new (ha, ha) thing called Hacking... It seems like we hear dozens of news stories about major personal data-thefts by hackers every year, maybe more – and that's just the incidents the news chooses to tell us about.

Imagine data thieves with the power to not only buy your publically / legally available information, plus your even deeper, stolen data, and then have their AI-agents process it for them to get a model of You so good that they can predict Exactly how you behave, or even impersonate you?

Wait – what? They Already do that? Crap – and now images and video, too?!

Well, at least they haven't figured out how you Think... or have they?! Yes, pretty much.

When AI is given all publically-available and theft-available profile information, plus biofeedback data from cameras and fitness-trackers, its predictive ability on your thinking patterns across:

Personality and stress response

Cognitive load / capability and emotion

Full thinking patterns

It's now about 90% accurate in a lab, maybe 70% accurate in the wild.

About predicting your THOUGHTS!

Now that you know (from Part 2) how well Meaning-Scammers have been hacking our behavior-reinforcement neurotransmitter patterns – Without AI, and Without even understanding the real mechanism – for 1000s of years, how long do you think it will be before Manipulators use AI-predictive-modeling for Meaning-Scams that will be nearly irresistible for most humans?

They're likely trying it out right now, and those Meaning-Scams will likely be widespread within 2 years.

Are you scared, yet?

So what the hell can we do about it?

We who've read this book already know.

In one sentence:

Keep your Meaning-Scam resistance high (even for AI-assisted Meaning-Scams) simply by ensuring you're constantly keeping your brain-drugs from depleting – by taking micro-actions on the VITAL-27 Life Factors every day.

Zero cost, zero subscription, zero guru – you already own the solution.

Now you see why this book is important enough that it has to be given away for free. :)

Part 5:

Appendix – Formalizing Voliberatism per
Philosophy Norms

Usefulness and Formality

Philosophies need to be useful, and certainly Voliberatism does that (showing each of us how to live an Actualized Life, explaining our human obsession with finding Meaning and arming us against those who would take advantage of us because of that obsession, and helping us discover what we deem as important pursuits).

Additionally, there are certain required subjects a Complete and Formal new philosophy has to address – and this Appendix is that nerdy part. It's where Voliberatism is defined as a Complete and Formalized philosophy for all you other philosophy geeks out there.

A funny thing about philosophies is that even though they're supposedly about using logic to understand Reality, they're still created by humans who think differently from each other.

In other words, All philosophies are still just Opinions; there is no single philosophy which can be right about everything (except by coincidence – and we still couldn't Know it was right, even if it was).

Appendix contents:

- Axioms of Voliberatism
- Metaphysics (the nature of reality)
- Epistemology (how we know what we know)
- Ethics and Morality
- Logic
- Aesthetics
- How our minds function, e.g. what is consciousness, language, etc.
- How civilization should operate with regard to politics / government, money, and religion

Axioms

- 1: Our conscious human experience is an emergent property of physical processes governed by natural laws
- 2: Our subjective experience of volitional choice is real to us / sufficient for ethical and practical philosophy
- 3: An Actualized Life is daily trying to improve yourself and your circumstances and the circumstances of those you care about, cultivate positive relationships, and produce creative works – all while having fun

Metaphysics

Yes, there is a true physical Reality, or essence, to the universe in which we live. However, humans do not yet understand all the governing laws of reality or all the elements of reality.

For instance, all our scientific theories about the origins of the Universe, and even the laws of physics, break down at the Singularity – the point just before the Big Bang when all matter and energy were concentrated in one location, and time did not yet exist.

This does not mean that phenomena exist outside the working of natural laws – there is nothing "supernatural" about reality. Every phenomenon has a real cause, including life and self-awareness – which are emergent properties of complex material interactions, still operating in accordance with natural laws.

There is no guiding "Purpose" or "Meaning" to Reality – those terms are human constructs to help us function within a Reality which we don't yet fully understand (because our brains function better when things "make sense" to us).

All changes happen because of cause-and-effect mechanisms which operate logically according to natural laws / influencing factors – this applies even to human decision-making, i.e. we would decide / do everything exactly the same each time, if the exact same influencing factors were in place (including which brain synapses fired at a given moment, etc).

Yes, that means that "free will" is fundamentally illusory – though free will, as an operating framework, is useful for humans to live the Actualized Life they desire.

Humans do not yet understand everything about Reality or its governing laws, but they do exist – and we continue to learn more about them with science and logic.

Space is not a different substance from everything else and doesn't act outside of physical laws. Space still contains matter, but the particles of matter are simply far apart. [Seriously, we really still have to state that space is not some special “Ether” to fully define a philosophy in this day and age?]

Time; sequences of events happen in one real way, and once they happen they do not un-happen. We mark that as the passage of time. The exact same sequence of events may appear to happen differently depending on an observer's perspective / frame of reference (so what we consider as time is relative / can dilate, etc).

Voliberatism aligns with determinism, is atheistic, and borrows the idea of abstraction from the senses from Aristotle (he'd probably punch me for taking only that single piece in this context – but he's dead).

Causation of essences is not totally clear in this case, of course, but there's no practical (which excludes Spinoza), metaphysically-pure philosophy, and this definition doesn't detract from our ability to live without contradictions.

Miscellaneous Definitions

Stolen piece from Aristotelian Realism: brains group items and label them via patterns, not by inherent item properties

Determinism: every event is fully caused by prior events + laws; perfect knowledge of the past guarantees the entire future

Epistemology

Knowledge is gained from empirical observation, scientific experimentation, and logic (for instance, if $A=B$ and $B=C$, then $C=A$). And what we “know” to be true about a thing currently, could well be considered false as we later learn more about that thing.

Perhaps an Ultimate, objective and independent Truth is possible, but the truths available to humans are always fallible / perspective-dependent. In other words, we need to revise what we think of as true when we obtain more knowledge (again, by testing / empirical observation / experimentation / logic), and we must acknowledge there are biases in determining what Truth really is.

As an example, someone may describe a picture hung on a wall as centered (their view of a Truth), without it being exactly centered (to the nearest .0001 inch, for instance). And someone standing off to the side of us and closer to the wall might say it's offset to the opposite side of where they're standing. Both of them are right – from their perspectives they're both stating a Truth. Even if they agree, though, we can just as well say they are both wrong because the picture is not Exactly centered to a particular level of accuracy.

As another example, say we asked an AI system to predict the behavior of a stock price based on a bunch of financial factors we thought would be useful. And let's say it determined, and demonstrated 100 times in a row with real data, that our particular stock rises just after the weekly average price of gold is announced, assuming gold is also rising (yes, new knowledge from AI is possible, by the way, and will occur more frequently as AI improves).

Then, we go bet on our stock and lose our shirts because the AI's prediction was wrong that week – because other variables were involved that we didn't earlier consider.

So we always have to question our knowledge and premises / skeptically continue to improve our knowledge.

Voliberatism leans toward justified true belief, but also allows we may be fooled into what is True, and therefore should be skeptical (somewhat, but not fully, like indefeasibilism).

Rationalism is not mutually exclusive of empiricism for many subjects, and we should always be humble enough to be skeptical that we really know what we think we know.

Voliberatism is generally pragmatic on truth, and leans towards coherentism for beliefs and representationalism in sensing reality.

Miscellaneous Definitions

Justified true belief (JTB): knowledge is a belief that is true and backed by good justification

Indefeasibilism: knowledge requires justification that no possible further truth could defeat

Rationalism: reason alone is the chief source of knowledge

Empiricism: all knowledge comes from sensory experience

Coherentism: a belief is justified if it coheres with your whole belief system

Representationalism: we directly perceive mental representations (ideas), not external objects themselves

Ethics and Morals

Ethics and Morals are human-constructed concepts, and what is acceptable will vary / is relative, based on culture and norms, and evolves over time.

Is it right to eat meat / to kill another creature to feed ourselves if we're not starving? If so, then can we kill and eat an animal in a country where that animal is sacred to that culture / its national religion, even if it's raised as food in our country? Not if we don't want to go to prison!

How about eating pets? Dogs and cats are fine to eat in some countries, but are loved pets in other countries. What about stray dogs and cats in whatever country?

How about eating humans? That's still considered okay in some locations of the world.

What about eating living plants? Cutting down live trees for firewood or construction? Adding pollution to the air of a city for one steel mill to produce steel needed to build a cutting-edge hospital in another state?

How about buying and selling stocks of companies where you influence which companies get large contracts? Does that harm anyone?

What about talking with kids about sex, and showing them rough drawings of that mechanism? What about glossy photos, instead? At what age is any of that appropriate, and who should be their teacher in that subject – and is it acceptable if that person has a different bias about sex from you, which might influence the child?

If you say parents have that responsibility, what about orphans? Or what if the parent is a bi-sexual, drug-addicted prostitute?

How about killing people in war? Or killing as punishment for certain crimes? Are unborn babies considered "people," and if so, at what point does becoming a "person" happen in the development process? What if a mother refused to give up smoking and drugs while she was pregnant and the baby was still-born – is she then a murderer? Should she have been forced to not smoke during pregnancy?

What if leaving a flood-control hatch open to save one person inside a room filling with water on a sinking ship would further endanger all the rest of the people on the ship; do you seal the hatch and kill the one person? What if that person was the only person who could steer the ship to shallow water before it sank / everyone drowned, and that particular bit of shallow water was wading distance from a land where the rest of the people on the ship, all the terminally ill and dying-within-a-week, could obtain a cure for their illness?

My point of all these questions is to show that intent matters, and outcomes matter, and that individuals matter, and groups matter, too – and even trees and air quality matter. We should be careful in our judgments in Ethics and Morals. There are arguments and extenuating circumstances for both sides of every ethical and/or moral decision. And sometimes we still have to judge a "least-harm-done" solution in situations with multiple "bad" options (which is probably the best target we can shoot for in Ethics and Morals, overall).

Voliberatism aligns with relativism on morals and ethics (because they're subjective / human-created / culture-derived, and of course, secular).

Altruism, justice, and rights are all human creations – nothing along those lines is inherent because we humans are really just a product of scientific phenomena – again, we're lucky to be alive.

To get along well, though, it does make sense that we try not to deliberately do injury to each other in normal circumstances.

Voliberatism does not take an inflexible stand on trolley problems (like the ship problem above) and utilitarianism – like I said there are good arguments for both sides of those types of issue.

Generally, it's best to avoid hurting one person to make life better for many – but again, there are exceptions.

Obviously, based on earlier Parts of this book, Voliberatism is a proponent of self-actualization for the Good Life (in the way we defined it earlier in this book).

Ethical naturalism is the logical choice (vs. non-naturalism) for Voliberatism, given ethics and morals are deemed secular / not requiring divine command.

Voliberatism is therefore a proponent of preference-utilitarian secular ethics, i.e. the correct action is the one which best enables willing, competent humans to live Actualized Lives without preventing others from doing the same.

Miscellaneous Definitions

Utilitarianism: the “right” action is whatever maximizes overall happiness (or pleasure) for the greatest number

Ethical naturalism: moral facts (good or bad) are just natural facts about the world, discoverable by science

Logic

Logic, on the other hand, is not relative or subjective – pure logic, applied correctly, is universal and always correct. If something seems contradictory or paradoxical, that's because of some error of application, or a misunderstanding, or a misrepresentation of the logic itself (like the “Liar’s Paradox,” which is just a semantics error – if represented symbolically it would be an error of application).

Logic applied to ethics, and even aesthetics, is at least defensible. Though, again, on those relative / subjective applications, even logic will not gain universal agreement.

Yes, Voliberatism agrees with the standard logic laws of identity, excluded middle and non-contradiction, and circular reasoning is not logically valid.

Logic / a priori knowledge is a valid part of overall epistemology.

Aesthetics

Aesthetics / beauty is subjective. For a person who hates the color green, a hillside of healthy evergreen trees may look ugly. A scene of a grey-skinned, wrinkled old lady on her deathbed could still be beautiful if we can also see the appreciative smiles of her offspring listening to her lovingly tell them how she's so happy to see them one last time at that end of a life she is proud of / truly enjoyed.

What strikes someone as beautiful, emotionally and/or intellectually, could be influenced by both conscious and unconscious factors which vary from person-to-person. Which is why someone saying that it's not okay to have a carefully-shaped, multi-colored pile of poop attracting flies in an art museum, might still offend a bunch of shaped-poop sculpture aficionados somewhere.

Art can take essentially any form, and seek to influence the emotions and / or intellect of those who view / experience it for all sorts of reasons, including political, education, pleasure, etc.

Seeing, or especially creating, something we consider beautiful enhances our lives / helps us flourish as a species – though that is of course secondary to our survival. For instance, it's still okay to burn an ancient, one-of-a-kind, hand-illustrated text if that's the only way to keep from freezing to death – but it will still probably make you cry to do so.

Do animals appreciate beauty because it's pleasing to the eyes (differences in male versus female bird plumage, for instance), or is their appreciation only related to survival and reproduction? Either side of that argument is possible, and debatable.

Will AGI someday find "beauty" in a highly efficient string of programming code? That seems possible, too.

Political and Monetary Philosophy

What if all humans on our planet were just freely and peacefully trying to live an Actualized Life – cultivating positive relationships, improving themselves, producing creative works, and having fun; would we need much government? No.

And what prevents that peaceful vision from becoming reality? Those damn sociopaths, psychopaths, nihilists, and idiots set in their ways so much that they can't envision something that might be better than the dogma they have in their heads, that's what! And lawyers, of course – have to also blame them whenever we get the chance, ha ha!

Even in that ideal, Actualized World, though, people would still want to interact (peacefully) with each other - so they should work together to set up a set of rules for trade of goods and services, property management, enforcing rules and preventing oppression of others / allowing equal opportunity to thrive for all, protecting their community from rogue predatory groups (sociopaths - and probably damn lawyers, too ;)), judging disputes, keeping their resources from being exploited inappropriately, preventing pollution that would impact others, and protecting their community's ecosystem from being overly damaged in producing housing, products to trade, means for transporting goods, energy production, etc.

In other words, even an idyllic society of happy people would need to consensually develop some sort of minimal system of government – with "minimal" being the key word, here (to protect the way they desire to peacefully live / their liberties / rights [which must be agreed upon by the people, themselves, by the way]).

And that government should treat everyone in its society equally, no matter their beliefs about the nature of reality / religion, the way they look / their ethnicity, their sex, their abilities / inabilities, and the way they act in private (as long as it doesn't negatively impact their neighbors), etc, i.e. it should be secular in nature.

How should that government be funded, you ask? By taxes on goods and services transactions; definitely Not on property or income (because that punishes people for being productive, which productivity should actually be encouraged, rather than discouraged by taxation).

Note, it's possible that widespread robot usage in the near future may change the way scarcity is measured, and our need for taxes, in general. Other means of funding the government should be investigated at that time, but the main thing is to not tax productivity in any way.

On the topic of money: we can agree that it makes sense to not have to carry your bushels of rice to the store to trade for heads of lettuce, i.e. a government-backed measure of exchange / money makes sense (whether physical or electronic). And since it's government-backed, the government must store an equivalent amount of physical material to ensure that money's actual value (probably a combination of non-spoiling commodities that have value because of their utility, e.g. copper, silver, lithium, oil, etc).

Would it be good if the same form of government applied worldwide? Absolutely! In fact, the sooner we could implement a worldwide system of government, the better – because if we're happily organized well as a whole, then when an AGI eventually takes over the world, it will at least consider humans to be manageable, and therefore might not logically decide to destroy us

outright because we constantly act like an annoying bunch of quarreling idiots (as a species, overall) – because at least some of our creative works are cool, after all.

Political philosophy should error on the side of prioritizing individual rights and freedoms / liberalism (in the real sense of that word, not what it's come to mean in US politics) over communitarianism.

Political authority comes from a social contract, and power should be structured democratically.

“Fairness” is really a juvenile concept (because it can’t be universally defined for all parties to an argument – there’s always negotiation and compromise), however the fairest treatment of society will come from meritocracy. Everyone should have an equal opportunity for achievement, but they Do have to earn achievement / greater rewards by excelling, often by excelling beyond their peers.

Philosophy of the Mind

Life is interesting, and conscious life (derived from ever more complicated / evolved physical brain connections) is even more interesting – and it's especially cool / lucky that brains are sophisticated enough that we can design and build nuclear power generators, and water filtration systems, and integrated circuits, and even discuss philosophical opinions together.

And as we continue linking bits of information / knowledge / experience / creative ideas together, we continue expanding our abilities to create new, cool stuff. In other words, our minds are getting better and better over time.

The AI systems we're producing now are also getting better and better over time – helping us find ways to tie more and more complicated stuff together, and provide useful information in developing new molecules, processing information, etc, etc.

At some point AI capability will be tied directly to / interface directly with human minds, as an emergent intelligence / property of the mind. At that point it will probably be easier to measure / assess / quantify the exact factors that stimulate particular sets of synapses within our minds to make the decisions we do.

Because, yes, our decisions really are based on conditions and environment and stimuli which can theoretically be exactly replicated. For example, if we could go back in time and exactly replicate all the conditions / factors that caused us to marry an incompatible spouse, we'd just go and do it all over again. Ugh!

And yes, that also means that what we consider to be "free will" is actually illusory; our brains are just highly evolved (at least compared to other life on this planet), very complicated, wet

computers that produce distinct (replicable) outputs directly based on specific inputs.

Which is, by the way, why social media / "news" can cause us to act / react particularly / predictably stupidly sometimes (based on feeding us carefully calculated persuasive input).

[The Idea of free will is certainly useful, though – it allows us to Voliberately (ha, ha) live an Actualized Life!]

"Communication" happens even between ants, which do not have much upstairs, cognitively. So communication (one creature intimidating another creature to prevent food theft or gain a mate, for instance) is different than "language" – the latter requiring more brain development.

Once the requisite brain sophistication is in place, then language can be developed. There are a lot of scientific theories about how languages are developed, all of which make logical guesses. We all agree language is useful, complicated, can influence the way we think, how our culture is developed, etc.

There are no agreed-upon answers to fully explain language development yet, so Voliberatism will go with the latest science on that question.

Voliberatism goes with physicalism for the mind-body relationship, though acknowledging that the mind controls the body and therefore can actually affect the body unconsciously, e.g. too much unrelieved stress can make you feel sick, or can release endorphins to make you feel well. And contrariwise, the food you eat, and the amount you sleep and exercise you have can certainly also affect the function of the mind.

As for the question of how physical brain processes can create a conscious subjective experience, we humans just don't yet understand all the physical mechanisms that create that experience (though, yes, they are essentially physical / electrical). And the reason the qualia are different from one person to another in experiencing the same stimuli, is because brains are physically different in their internal connections.

Philosophy of Religion

Just because Religion and Reality both start with Re, does not mean they have much in common. Religions contain elements which are supernatural / imaginary and/or divine (or have imaginary properties), whereas Reality is based on things that actually exist and which operate according to natural laws (even if we don't yet understand how some of those laws are applied).

Religions were useful as civilizing tools when humans were learning practical behavior for living together in large groups, but they were human-creations made for controlling people (by convincing them of a particular "Meaning" of life, which "Meaning" varies sect to sect, of course). Nowadays, while religions can still be useful in communities for several reasons (including psychologically, physically helpful to the needy, socially, etc), it's outmoded for us to think of any of them as "correct" in terms of how they describe Reality (since they include those non-real elements as tenets).

Because of that usefulness, the detrimental cognitive dissonance they cause to their adherents (by brainwashing people to "believe" something illogical in order to feel included / supported) has to be balanced against their positive attributes in a community – so society should still tolerate all useful religions as long as they're not detrimental to non-believers.

That pretty much covers all the formal stuff – thanks for reading!

About Timothy Franck

Tim wrote a complete, original philosophy in which he addresses life's Meaning question in a unique way, called, "Voliberatism – A Practical Philosophy for the 21st Century," and he provides that book to anyone who wants it, entirely free.

It could well be useful – we'll see.

Beyond that, Tim is one of six kids, has a great wife and his own batch of kids, a degree in structural engineering (and some other Masters-level stuff), 20+ years of professional supply chain experience, a couple of dogs, and is a veteran of 4 years in Army Airborne Infantry (Rangers).

He's also fairly well-traveled, heterochromatic, reads and writes a lot, was once was on TV as a voice in a Boy Scout recruiting commercial, course-tested the obstacles for the Los Angeles American Ninja Warrior show finals, plays the tuba, lived in a van traveling the country for a year, was best friends / used to ride bicycles with an Olympic cyclist, cliff-jumped 90 feet multiple times, moved over 50 times, survived an airplane crash, loves rock climbing, scuba diving, and snowboarding, makes up amazing Dad-jokes, and has never broken a bone.

He currently lives with his awesome (better than him) family in the western United States.

Tim's username on X.com is @orangutim
